Bellevue, WA | 347-927-4688 | cakalyasin88@gmail.com | [linkedin.com/in/yasincakal](https://www.linkedin.com/in/yasincakal) | github.com/yasin1122

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C#, Python, SQL, HTML/CSS, Bash

Frontend: React, Redux Toolkit, Material UI, TanStack, Next.js, Tailwind, Figma

Backend: .NET, NestJS, REST APIs, JSON Schema codegen, Cosmos DB, MongoDB, PostgreSQL

Testing & QA: Playwright (E2E, page objects, codegen, fixtures), Istanbul code coverage, Jest, ts-jest

DevOps & Cloud: Azure DevOps, CI/CD pipelines (YAML), Docker, Git, pnpm monorepos

Security: Snyk, Wiz CLI, CVE remediation, RBAC design, SAST triage, Datadog, Observe, PagerDuty

EXPERIENCE

Software Engineer (Full Stack), Truveta, Bellevue, WA

Jun 2025 to May 2026

Internal labeling and review platform for the Notes Annotation team, used by clinical experts to produce training data for the Truveta Language Model (TLM); supports project management, batch workflows, and AI-assisted cleaning of clinical notes drawn from 30 US health systems.

- **First engineer at the company to put testing into CI.** built the team's Playwright E2E suite from the ground up, including: local test running, page objects and fixtures, an interactive pnpm CLI for run/codegen/coverage, and the CI pipeline integration; coordinated cross-team for service accounts and pipeline authentication.
- **Drove full-stack code coverage to 80% and onboarded the team.** wrote Istanbul coverage instrumentation across React, NestJS, and .NET layers; authored the comprehensive E2E README and walked engineers through the workflow so they could write their own tests; mentored an intern on an adjacent team who replicated the setup as their intern project.
- **Designed and built features end to end across the annotation platform.** search with deep-linkable results, server-side list filters (publish status, type, team), team management CRUD, and persisted user theme/view settings. Owned UI/UX, frontend, proxy, and backend implementation, working with light design support.
- **Sole owner of security and dependency hygiene for two teams.** handled all Snyk alerts, Security Risk Exceptions, and False Positive submissions for our team and a sister team sharing the repo; resolved CVEs in the @nestjs/* family, axios, lodash, uuid, protobufjs, node-forge, hbs, and fast-xml-parser; led a 15+ file Open Redirect SAST sweep using a sanitize-and-safe-navigate pattern; upgraded the Wiz CLI v0 to v1 pipeline ahead of vendor deprecation.
- **Regularly unblocked CI/CD pipelines for two teams (20 engineers).** took ownership of pipeline failures across the shared monorepo, often resolving within an hour; coordinated with Snyk vendor support to diagnose a pnpm and Snyk-monitor incompatibility blocking the build, and re-enabled monitoring once the long-term fix shipped.
- **Cut project list page load from 20-30 seconds to under one second.** owned a V2 to V3 migration end-to-end (full stack) that introduced pagination, eliminated a redundant full-table count query on every load, and lazy-fetched per-user favorites from Cosmos DB.
- **Designed the team's reusable pattern for paginated, filterable lists.** implemented server-side pagination with a conditional-spread filter pattern on the frontend and HashSet-based permission intersection on the backend; pattern was adopted across subsequent list endpoints.
- **Drove an RBAC migration across three repositories.** moved GPU allocation access control off feature flags onto an organization-wide RBAC permission, coordinating with the platform RBAC team and shipping the change across three services with zero regressions.
- **Carried the monthly on-call rotation for two teams.** covered alerts for our team and a sister team while on rotation, through a PagerDuty and Jira tooling migration; took over the production read-failure runbook, coordinating fixes with the upstream data pipeline team.
- **Resolved 20+ production bug fixes across the platform.** diagnosed issues from Datadog and Observe telemetry, including a recurring MUI invalid-color crash and a Redux selector TypeError firing before its source API resolved.

Full-Stack Developer, Code of Code

Apr 2020 to Jan 2022

- Built and maintained an eLearning platform for software engineering students using JavaScript, React, and a Node backend; implemented analytics, security, accessibility, and SEO best practices.

Freelance Web Developer, Fiverr / Upwork

May 2017 to Apr 2020

- Built responsive web applications using JavaScript and React for clients across e-commerce and education; consulted on architecture and tutored students.

EDUCATION

B.S. Computer Science, University at Albany (SUNY) (*Cum Laude, Dean's List*)

Aug 2013 to May 2017
